A MINI PROJECT REPORT  
on  
“CONSTRUCTION MANAGEMENT SYSTEM”

*Submitted by*

Anand S B Patil

4SF22IS402

Pavitra Shankar Naik

4SF22IS407

*In partial fulfillment of the requirements for the V semester*

DBMS LABORATORY WITH MINI PROJECT  
of

BACHELOR OF ENGINEERING

in

INFORMATION SCIENCE & ENGINEERING

*Under the Guidance of*

Mrs. SUKETHA

Assistant Professor

Department of CSE

at

SAHYADRI

College of Engineering & Management

Mangaluru - 575 007

2023 - 24

**SAHYADRI**  
**College of Engineering & Management**  
**Mangaluru - 575 007**

**Department of Information Science & Engineering**

**CERTIFICATE**

This is to certify that the **Mini Project** entitled “ **CONSTRUCTION MANAGEMENT SYSTEM**” has been carried out by **Anand S B Patil (4SF22IS402)** and **Pavitra Shankar Naik (4SF22IS407)**, the bonafide students of Sahyadri College of Engineering & Management in partial fulfillment of the requirements for the V semester **DBMS Laboratory with Mini Project (21CSL55)** of **Bachelor of Engineering in Information Science & Engineering** of Visvesvaraya Technological University, Belagavi during the year 2022 - 23. It is certified that all corrections/suggestions indicated for Internal Assessment have been incorporated in the report deposited in the departmental library. The mini project report has been approved as it satisfies the academic requirements in respect of mini project work.

**Department of Information Science & Engineering**

**DECLARATION**

We hereby declare that the entire work embodied in this Mini Project Report titled **”CONSTRUCTION MANAGEMENT SYSTEM”** has been carried out by us at Sahyadri College of Engineering and Management, Mangaluru under the supervision of **Mrs. SUKETHA** as the part of the V semester **DBMS Laboratory with Mini Project (21CSL55)** of **Bachelor of Engineering in Information Science & Engineering**. This report has not been submitted to this or any other University.

**Anand S B Patil (4SF22IS402)**  
**Pavitra Shankar Naik (4SF22IS402)**  
SCEM, Mangaluru

# Abstract

The Construction Management System (CMS) is a comprehensive software solution designed to streamline and optimize the management of construction projects from inception to completion. It integrates various tools and modules to facilitate efficient communication, collaboration, scheduling, budgeting, resource allocation, and documentation management throughout the project lifecycle. The CMS enables users to create detailed project plans, define tasks, allocate resources, and establish timelines. It offers Gantt charts, critical path analysis, and milestone tracking functionalities to ensure projects stay on schedule. Users can efficiently allocate labor, equipment, and materials to different tasks and projects. The system provides real-time visibility into resource availability, utilization, and allocation, enabling better decision-making and resource optimization. Users can generate customizable reports and dashboards to track project progress, performance metrics, and key performance indicators (KPIs). The CMS provides insights into project health, risks, and trends, enabling informed decision-making and continuous improvement. The CMS facilitates seamless communication and collaboration among project teams, stakeholders, and subcontractors. It offers features such as messaging, notifications, file sharing, and task assignments to improve teamwork and productivity.

# Acknowledgement

It is with great satisfaction and euphoria that we are submitting the Mini Project Report on “**Construction Management System**”. We have completed it as a part of the V semester **Database Management Systems Laboratory (21CSL55)** of **Bachelor of Engineering in Information Science and Engineering(DSE)** of Visvesvaraya Technological University, Belagavi.

We are profoundly indebted to our guide, **Mrs. Suketha**, Assistant Professor, Department of information Science and Engineering(DSE) for innumerable acts of timely advice, encouragement and We sincerely express our gratitude.

We express our sincere gratitude to **Dr. Rithesh Pakkala P**, Assistant Professor & Head, Department of ISE(DSE) for her invaluable support and guidance.

We sincerely thank **Dr. S. S. Injaganeri**, Principal, Sahyadri College of Engineering & Management, who have always been a great source of inspiration.

Finally, yet importantly, We express our heartfelt thanks to our family & friends for their wishes and encouragement throughout the work.

**Anand S B Patil(4SF22IS402)**

**Pavitra Shankar Naik(4SF22IS407)**

# Chapter 1

## Introduction

In the dynamic landscape of construction projects, efficient management is paramount for success. Traditional methods of project management often fall short of addressing the complexities inherent in construction endeavors, leading to delays, cost overruns, and communication gaps. However, with the advent of technology, there arises an opportunity to revolutionize construction project management through the implementation of a comprehensive Construction Management System (CMS).

The construction industry faces unique challenges ranging from resource allocation and scheduling to communication and documentation. A construction managerial time system offers a holistic solution to these challenges by providing a centralized platform where all project stakeholders can collaborate, plan, execute, and monitor project activities in real time.

This project aims to develop and implement a robust CMS tailored to the specific needs of construction projects. By leveraging advanced software technologies, such as cloud computing, data analytics, and mobile applications, the CMS will streamline project workflows, improve decision-making processes, and enhance overall project efficiency.

By implementing a comprehensive Construction Management System, this project aims to address the inherent challenges of construction project management, leading to improved efficiency, reduced costs, and timely project delivery. Through collaboration and innovation, the construction industry can embrace digital transformation and pave the way for future success.

## 1.1 Purpose

The main purpose of this project is to Construction projects involve numerous stakeholders, including architects, engineers, contractors, subcontractors, suppliers, and clients. The CMS aims to improve communication and collaboration among these stakeholders by providing a centralized platform for sharing information, exchanging updates, and coordinating activities.

## 1.2 Scope

To provide user-friendly and quick solutions for managing sites through an online web application that can collaborate between site engineers and managers from different sites In the present system, all the refineries are not in single pieces. The Existing System for the construction process is having the human work. If the Company wants to check the day-to-day human resources and equipment management logs is a difficult task for human capabilities from all the construction sites the user must go to every and check for the products so to overcome all these disadvantages, a new system developed where in the user will get all the details of the product at one place.

## 1.3 Overview

Here user signs up for the application, once he is registered then he can directly log into the application with a valid user ID and password and keep information seamlessly. Where one can manage documents and cash protected. Users can access information also request information, and upload information regarding their usage, all receipts, and bills can be uploaded electronically.

# Chapter 2

## Requirements Specification

### 2.1 Software Specification

- Database : MySQL 5.6.17
- Markup Language : HTML
- Scripting Language: PHP 5.5.12
- IDE :NetBeans 8.0.2

### 2.2 Hardware Specification

- Processor : Intel
- RAM : 8GB
- Input device: Standard keyboard and Mouse
- Hard disk : 1TB

# Chapter 3

## System Design

### 3.1 ER Diagram

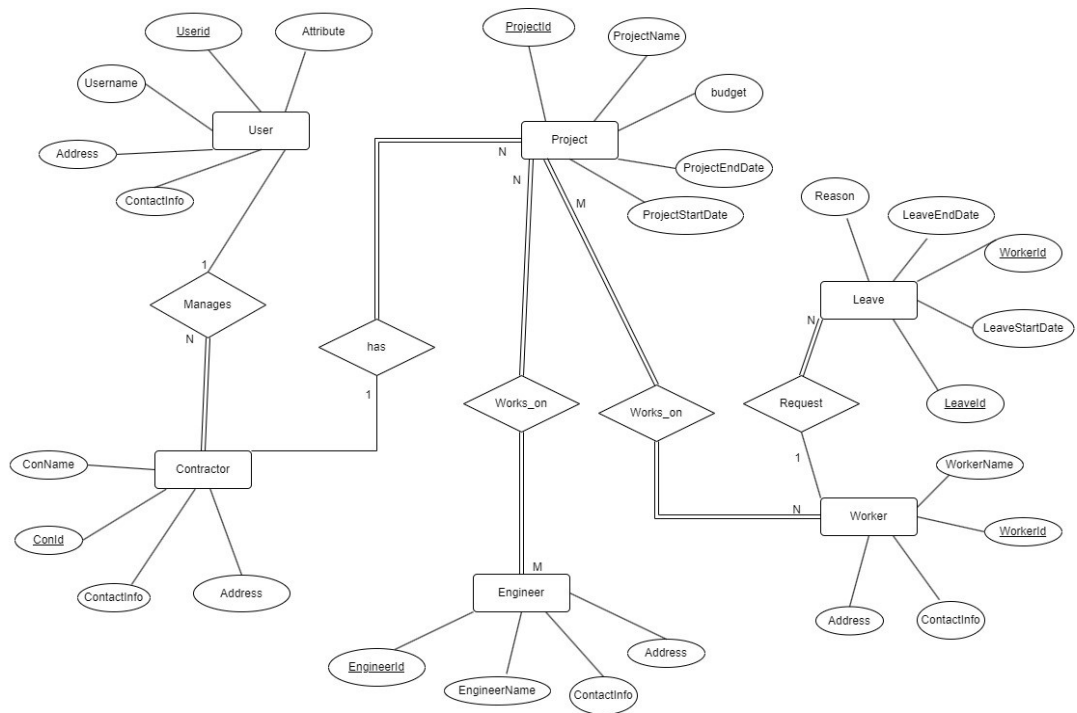

Figure 3.1: ER Diagram for Construction Management System

Provides a basic representation of how different entities within the construction management system are related and interact with each other. It helps in understanding the structure of the database and how data flows between different components of the system.

## 3.2 Mapping From ER Diagram to Schema Diagram

### 3.3 Schema Diagram

A schema diagram for a Construction Management System (CMS) provides a visual representation of the database structure and relationships between various entities involved in construction projects. This table represents individual construction projects. It typically includes fields such as ProjectID (a unique identifier for each project), ProjectName, StartDate, EndDate, Budget, and ClientID (a foreign key referencing the Clients table). The "Constructor" table in a Construction Management System (CMS) database would typically store information about construction companies or contractors involved in various projects. In a Construction Management System (CMS) database, the "Worker" table would store information about individual workers or laborers involved in construction projects.

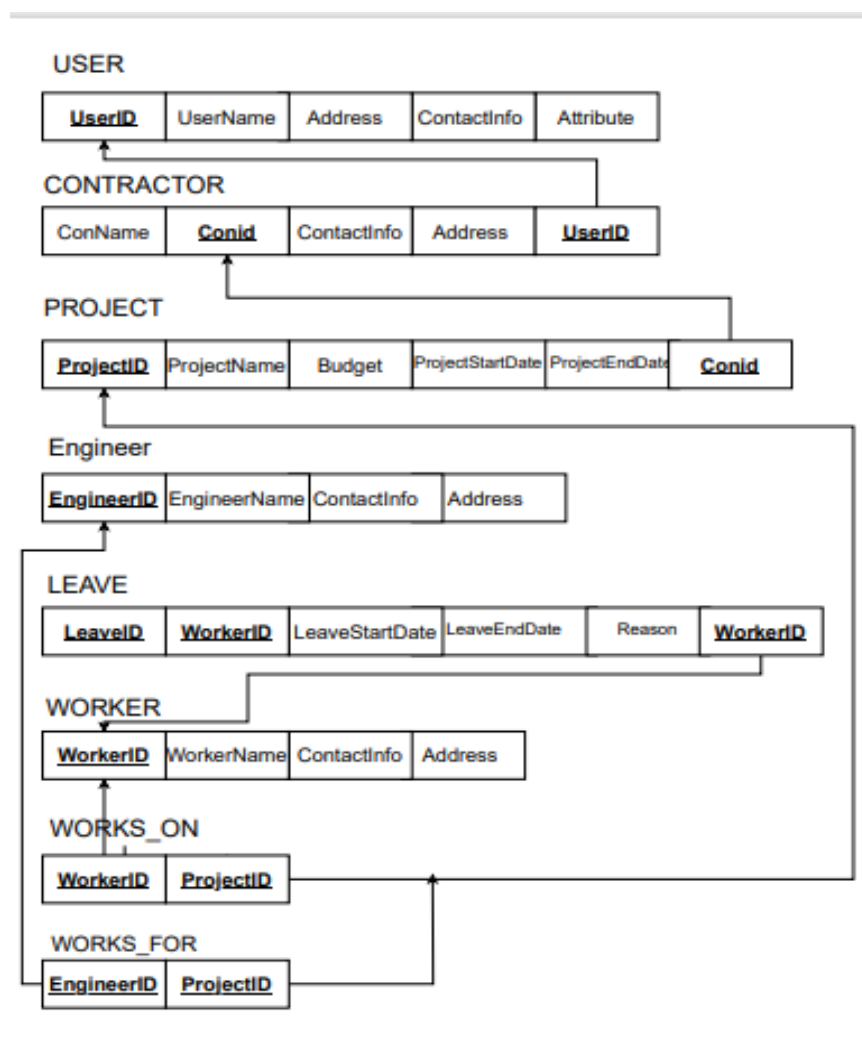

Figure 3.2: Schema Diagram For Construction Management System

# Chapter 4

## Implementation

### Constructor table :

```
CREATE TABLE contractors (  
id int(11) NOT NULL,  
name varchar(255) NOT NULL,  
email varchar(255) DEFAULT NULL,  
phone varchar(20) DEFAULT NULL,  
address varchar(50) NOT NULL,  
password varchar(50) NOT NULL,  
pro_img varchar(500) NOT NULL,  
role varchar(50) NOT NULL DEFAULT 'c'  
) ENGINE=InnoDB DEFAULT CHARSET=latin1;
```

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
<input type="checkbox"/> 1	lea_ID	int(50)			No	None		AUTO_INCREMENT	Change  Drop  More
<input type="checkbox"/> 2	from_date	date			No	None			Change  Drop  More
<input type="checkbox"/> 3	to_date	date			No	None			Change  Drop  More
<input type="checkbox"/> 4	reason	varchar(50)	latin1_swedish_ci		No	None			Change  Drop  More
<input type="checkbox"/> 5	Lstatus	int(50)			No	0			Change  Drop  More
<input type="checkbox"/> 6	wr_id	int(50)			No	None			Change  Drop  More
<input type="checkbox"/> 7	c_id	int(50)			No	None			Change  Drop  More
<input type="checkbox"/> 8	p_id	int(50)			No	None			Change  Drop  More

Figure 4.1: Constructor Table

**Leave table:**

```
CREATE TABLE leave (
lea_ID int(50) NOT NULL,
from_date date NOT NULL,
to_date date NOT NULL,
reason varchar(50) NOT NULL,
Lstatus int(50) NOT NULL DEFAULT '0',
wr_id int(50) NOT NULL,
c_id int(50) NOT NULL,
p_id int(50) NOT NULL
) ENGINE=InnoDB DEFAULT CHARSET=latin1; Payment
```

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action

# Chapter 6

## Conclusion and Future work

The implementation of a construction management system (CMS) marks a pivotal shift in the way construction projects are planned, executed, and monitored. Through its comprehensive suite of tools and functionalities, a CMS becomes the cornerstone of project management, facilitating seamless coordination among various stakeholders and optimizing resource allocation. By centralizing project data and providing real-time updates, it fosters enhanced collaboration and transparency, thereby mitigating risks and improving decision-making processes. Moreover, the scalability and adaptability of a well-designed CMS ensure its relevance across projects of varying complexities, while its compliance features help navigate regulatory requirements effectively. Ultimately, the successful adoption of a CMS translates into tangible benefits such as cost savings, improved project outcomes, and heightened customer satisfaction. As construction firms increasingly recognize the strategic value of technology in project management, the CMS emerges as a vital asset in driving efficiency, productivity, and competitiveness in the industry.
